CABN wishes to announce the retraction of the following article: “Local and global effects of motivation on cognitive control,” *Cognitive, Affective, & Behavioral Neuroscience*, 12(4): 692–718, 2012. As is detailed on the Web site of the Health and Human Services Office of Research Integrity (ORI), Adam Savine, the first author, has admitted to falsifying data contained in this report. The other authors of the manuscript were cleared of any involvement in this data falsification. Specifically, according to the ORI Web site, Adam Savine admitted that he “*falsified data in Cogn Affect Behav Neurosci. 2012 to show an unambiguous dissociation between local and global motivational effects. Specifically, Respondent exaggerated (1) the effect of incentive context on response times and error rates in Table 1 and Figures 1 and 3 for experiment 1 and (2) the effect of incentive cue timing on response times and error rates in Table 2 and in Figures 6, 9, and S2 for experiment 2.*” The other authors of this article are now undertaking a complete reanalysis of the raw data collected for this study and will pursue publication of the correct results as warranted.

The online version of the original article can be found at <http://dx.doi.org/10.3758/s13415-012-0113-y>.
